

Revegetation Equipment Catalog

Descriptions, applications, pictures, and sources for equipment used on rangelands.

Fencing

Description & Application

Fencing is sometimes required in revegetation projects to protect young seedlings from wild and domestic grazing animals. There are good publications from fencing companies that describe fencing methods and equipment in detail. Much of the information is available on the companies' website. An excellent book on fencing is available from the Society for Range Management.

Sources

The manufacturers' websites list information on equipment sizes, accessories, dealers, and their contact information.
